

# Span table 81 / 06-08

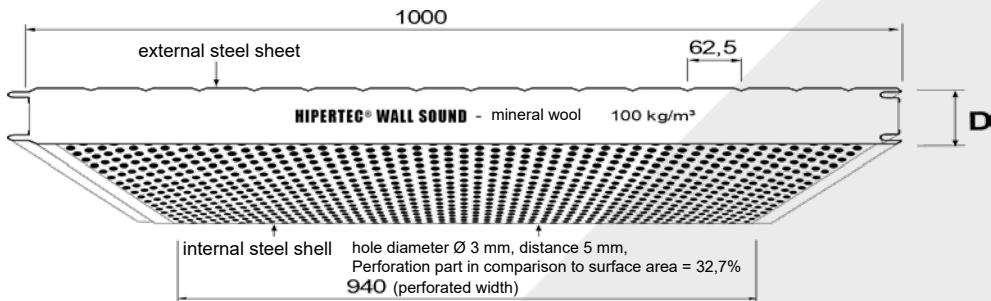

As of 03 / 2014

## HIPERTEC Wall Sound

$t_N = 0,60 / 0,60 \text{ mm}$

Max. valid supporting widths stated in the following are attested according to approval Z-01 from 09th of February 2000. The property of the core corresponds to the approval Z-10.49-517. Sandwich panels with perforated cover shells are not regulated in DIN EN 14509. The directions for the application of the table can be gathered from the data sheet.

Calculation of binding suction loads according to DIN EN 1991.

Prospect for  $e < d$

$$\text{Wind suction A-Area} = \text{velocity pressure } q \times c_p \cdot 10^{-2} = 1,2$$

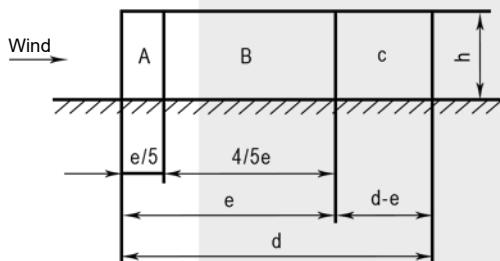

$$\text{Wind suction B-Area} = \text{velocity pressure } q \times c_p \cdot 10^{-2} = 0,8$$

$$\text{Wind suction C-Area} = \text{velocity pressure } q \times c_p \cdot 10^{-2} = 0,5$$

Calculation of area width cross wall:  $e = 2h$

Calculation of area width longitudinal wall:  $e = \text{width or } 2h$

$$A\text{-Area} = e/5, B\text{-Area} = 4/5 \times e$$
